II. A Catalogue of some Guinea-Plants, with their Native Names and Virtues; Sent to James Petiver, Apothecary, and Fellow of the Royal Society; with his Remarks on them. Communicated in a Letter to Dr. Hans Sloane. Secret. Reg. Soc.

SIR,

HE Following Plants, with their Native Names and Vertues, I fometime fince received from my Worthy and Reverend Friend, Mr. John Smyth, whilft

Worthy and Reverend Friend, Mr. John Smyth, whilft he was Minister to the Royal African Company in the English Factory at Cabo Corso, vulgarly called Cape Coast, in Guinea.
It were, Sir, needlefs to tell you the many Advantages that would accrue to the Art or Mystery of Physick, if the Vertues of all Simples were more nicely inquired into, or better known : I shall therefore wave it here, and only present you with an African Materia Medica, whose innocent Practice consists of no more Art than Composition, as you may see by the following Method, viz.
I. Aclowa, so called by the Natives in Guinea, dried and rub'd on all the Body is good for the Crocoes (or Itch.) Mr. John Smyth.

Itch.) Mr. John Smyth.

Colutea Scorpioides Guineensis Tragacantha Foliis, nobis. Its Leaves very much refembling those of Tragacantha, are fet by Pairs, to the Number of Twelve or Sixteen, and fometimes Twenty, each at a very fmall Diftance, viz. about an Eighth of an Inch. The Pods are long, Hhhhh fmooth imooth and firait, ending in a Point; fome of them above Four Inches long, and not thicker than a Crows Quill; the Seeds are finall, brown, fhort, thick and turgid; each feparated in the Pod by a thin, fpungy Interfepimentum or Partition.

(678)

2. Aconcroba, being boyled in Wine, and drank, is good in the Small Pox. Mr. J. S.

This I have mentioned at No. 21. in my First Century, its Leaves are stiff as the Phyllirea, and opake (i. e.)not to be seen through, they grow opposite on very short Footstalks, are taper at Points and base, the largest one Inch and $\frac{1}{4}$ (in the Middle) where broadess, and Three Inches long, very much resembling our Common Bay, are Black (now dry) on the upper side, and of a Pale Green underneath.

3. Acroe, Boyl'd in Wine and drank, is good to recover Strength. Mr. J. S.

This is a Trifoliate Shrub, it hath the Face of the Coral arbor, but is not spinose, the middle or top Leaf stands on an Inch pedicle, whereas the Two opposites have none.

4. Affunnena, Boyl'd in Wine and drank, caufes a Stool. Mr. 7. S.

5. Afoba, Pounded and mixt with Oyl, is good for the Itch or Crocoes. Mr. J. S.

This is a fort of *Phafeolus*, or *Kidney-Bean*, with small hairy Leaves and Stalks.

6. Afto, dryed to Powder and fnuft, is good for the Head-ach, Mr. J. S.

Eryfimum lignosum Guineense tomentosum, nob.

7. Ambettuway, boyled and drank, caufeth an Appetite to any fick Perfon. Mr. J. S.

The Leaves of this in Shape and Roughnels are like our Common Elm.

8. Amea,

8. Amea, Dried into Powder and Snuft, ftops the bleeding, Mr. 7. S.

This hath alated or winged Leaves, and feems to be one of the *Pajamirioba* kinds, which you have to clearly diffinguished in your most excellent *Catalogue* of *Jamaica Plants*, at Page 148.

9. Apobee, Boyl'd and drank, is good for the Small Pox. Mr. J. S.

Chrysanthemum acaulon Guineense, foliis longis angustis,

The Teeth being washt with a Decotion of this in Water, is good for the Scurvy in the Mouth. Mr. J. S.

This Tree observes no Order in the Position or fetting on of its Leaves, being farther or nearer, and sometimes opposite, they are broad at the Base, with scarce any Foot Stalk, and so continue about Two Thirds, and then grow taper, are smooth and shining above, but of the beneath, and somewhat downy, especially the greater Ribs, which being held to the Light are darkly clouded, the largest Leaves are about Two Inches and an Half long, and One broad.

II. Aguaguin, made into a Plaister and applied to a Cut, cures it. Mr. J. S.

The Leaves of this Shrub refemble the Common Lilac or Blew Pipe Tree; they grow alternately, and ftand on thalf Inch Footftalks; if held to the Light you may perceive the leffer Veins very finely reticulated and fubdivided.

12. Afasi, Boyl'd and so kept in the Mouth, is good for the Tooth-ach. Mr. 7. S.

This Tree fomewhat refembles the Laurel, in respect to the Shape and Stiffness of its Leaves, which grow alternately on short Footstalks; its Branches are Black-H h h h h 2 ish, ish, rugged and sprinkled with small, Reddish, Spanglelike Specks.

13. Ascindoe, Boyl'd and the Water drank is good for the Running in the Reins. Mr. J. S.

Frutex Guineensis spinosus foliis subrotundis crenatis floribus filamentosis, nob.

This is a Thorny Shrub, with roundifh, fmooth, crenated *Leaves*, fomewhat more than an Inch broad, and about One and an Half long; these are set on very short Footstalks; at the top of each Branch stand small thrummy *Flowers*; its *Thorns* are bigger or less according as they come from the smaller or less ranches.

14. Allaba, Warmed in Water, and the Groin rubbed with it, is good for a Buboe. Mr. J. S.

15. Afferida, Chewed, is very good for the Belly-ach. Mr. J. S.

16. Assirumina, Pounded and rub'd on the Legs, kileth the Worms that breed there. Mr. J. S.

17. Atanta, Is very good to put in Broath for a Sick Man or Woman, it caufing Strength. Mr. J. S.

Rhus Guineense trifoliatum scabrum serratum, nob.

This differs from that Cape fort which Dr. Plukenet, that most fagacious Botanist hath Figured in his Phytographia, Tab. 219. under Fig 7. (by the Name of Rhus Africanum Trifoliatum majus foliis obtussis & inciss hir suite pubescentibus) in having its leaves edged with prickley Notches, whereas his is finuated or rather deeply waved.

18. Attrow, Boyl'd and any swelled part washed in the Water (i. e. Decoction) abateth it. Mr. J. S.

Kali Guineense foliis Polygoni, floribus verticilli in modum dispositis, nob.

I shall referve its Description until I give you the Figure of it, which I design with some other Guinea Plants, Infests, &c.

19. Attrum-

19. Attrummaphoe, Boyl'd and drank, cauleth the great fort of Pox to Skin and dry. Mr. 7. S.

The Juice of this Weed being fnuft up the Nofe, is good to make one fneeze. Mr. Edward Bartar. Of the Decoction of this Plant, is made a Drink good against the Phrenfy. Hort. Malab.

Colutea languinosa Floribus parvis filiquis pilosis deorsum tendentibus Mus. Petiver. 45. Orientalis plerumque S heptaphyllos hirsata, floribus spicatis saturate purpureis, filiquis plurimis quadratis valde pilosis summo succulorum dependentibus. Alm. Botan. p. 113. It was called by Dr. Herman (that late incomparable Botanist) Astraga-E lus Indicus spicatus si liquis copiosis deorsum spectantibus non falcatis feu Polylobos. And by the Inhabitants of Ceylon Pilæghas, as Joannes Comelinus afferts, in his Commentaries on the Hortus Malabaricus, in the Ninth Volume of which noble Herbal there is an Icon of this Plant, under the Name of Katu (which fignifies Sylve-ftris or wild) Tagera, Tab. 30. p. 55. Whofe Defcripti-on of it I shall briefly transcribe and intersperse my own Observations concerning it. It grows in fandy Places, about Two or Three Foot high; the Roots fibrose and whitish; its Stalks woody, redish, and very hairy; the Leaves grow by Pairs with one at the Extremity having Leaves grow by Pairs, with one at the Extremity having Three or Five (I have Samples of it with Seven or more) covered on both fides with a foft woollinefs (which are not express in the Figure, the like Omission I find in many others in this Work, whose Leaves, &c. are delineated smooth, although the Description and things themselves declare them otherwise) they have an altringent Tast, and are fomewhat biting.

It hath many small deep Purple Papilionaceous Flowers growing in a Spike to the top (of a Leafless Stalk;) its Calyx is composed of Six very narrow Hairy Leaves, the Pods are also very hairy, roundish, but not thicker than: 2.

a Packthread : of an Inch long hanging downwards on fhort (or rather no) Footstalks; the Seeds are small, lye length ways in the Pod, and are separated by a (thin) Partition.

20. Bumbunny, Boyl'd and drunk, causeth to vomit. Mr. J. S.

21. Caggow, Boyl'd in Water, and wash the Teeth, is good for the Tooth-ach. Mr. 7. S.

The Leaves of this Tree are fmooth and fhining, like the Lawrel, but thinner and veined like the Bay, they are Two Inches and $\frac{1}{4}$ broad, and between Four and Five long, these are round at the Base, and pointed at the Tip, or End, they stand on an Half Inch Footstalk, Black next the Stalk and Leas, and Greeniss in the Middle, its Veins are very conspicuous and much subdivided on both fides.

22. Canto, Boyl'd and drunk is good for the Running (I suppose of the Reins.) Mr. 7. S.

23. Concon, Pounded and mixt with Oyl, killeth the Worms in the Legs, by anointing with it. Mr. 7. S.

These Leaves differ from the Caggow Tree, at No. 21. in being thicker, stiffer, and not so full of Veins. These are broadest within i of the Base, and from thence grow regularly tapering; its Footstalks are thicker, somewhat longer, and all of a Colour.

24. Cuttofoe, Boyl'd in Water and drank, is good for the Belly-ach. Mr. 7. S.

Anonis non Spinofa minor glabra procumbens fl. luteo. D. H. Sloane Cat. Plantar. Jamaic. p. 75. This being that which you fo plentifully find in Jamaica, particularly on the Banks of the Rio Cobre near the City of St. Jago de la Vega, or Spanish-Town: 1 shall here omit its Description expecting both that and its Figure in your much defired Natural History of Jamaica, which you have have been to kind to promife the World the fudden Publication of.

25. Dancreta, Boyl'd in Water, and if the Head is hot, wash'd in the Water, abateth the Heat. Mr. J.S.

Convolvulus quinque folius Guineensis foliis non serratis. nob.

That laborious and indefatigable Reviver of Botany, Casper Baubine, in his Prodromus, p. 134. gives you the figure of an Ægyptian Convolvulus, which he calls Quinquefolius, that exactly refembles this in every thing, Ethe fine notcht Serratures of its Leaves only excepted, Ewhich in my Specimens are not clearly to be feen, al-Athough some of them seem to have such a Tendency or Disposition.

org/ 26. Dinjohn, Warm'd at the Fire, and applied to a Boil, breaks it. Mr. 7. S.

27. Emphrue, Boyl'd and drank, causes Strength in Sicknefs. Mr. J. S.

Mori folio non crenato Arbor Guineensis, nob. 28. Heniecoe, Boyl'd in Wine, is good for 28. Heniecoe, Boyl'd in Wine, is good for the Bellysach. Mr. 7. S.

29. Iffong, Put in Water, and the Head washt cureth She Head-ach. Mr. J. S.

Pisum vesicarium, fructu nigro alba macula notato CB. 343. cordatum vesicarium Park. 1378. Fig. Halicacabum peregrinum ber. 271. Fig. id. emac. 342. Fig. It's also Figured in the Eighth Volume of the Hortus Malabaricus, Zab. 28. p. 53. under the Malabar Name of Ulinga, At's call'd at Barbadoes, from whence I have also received it Parfly. I find you have also observed it plentifully nin Jamaica, as appears by your incomparable Catalogue at p. III. to which for the Readers cafe, I refer them to the many other fynonimous Names, you have there with fo much pains collected together.

30. Mening

30. Mening, Dried and made into Powder and fnuft, is good for the Stoppage of the Head. Mr. 7. S.

(684)

Ricinus Guineensis Hederæ quinquefol. Virginianæ facie, foliis hirsutis, nob.

31. Metacoe, Pounded, and so applied, is good for a Cut. Mr. J.S.

With these Leaves the Blacks also make Match for their Muskets, as my kind Friend, Mr. Edward Bartar informs me.

32. Obrang, Boyl'd in Water, and fo wash the Cods, is good for the swelling. Mr. 7. S.

Glycyrrhizæ folio singulari, Frutex Guineensis spinis gemellis, nob.

33. Pocumma, Pounded and dried and Bak'd in Bread is good for the Flux. Mr. J. S.

34. Santeo, boyl'd, and the Eyes washt with the Water, taketh away any Film or Pearl. Mr. 7, S.

The Leaves of this Tree grow opposite, with one at the end without Footstalks; the Joynts and setting on of the Leaves are blackish, they are of the make and bigness of the Lawrel.

35. Sora, Boyl'd and drank, is good for any Pain about the Body. Mr. J. S.

The Leaves of this Shrub have the Shape and Bigness of those of Sena, but are somewhat woolly underneath, and are set on very short Foot-stalks.

36. Tetrephoe, Boyl'd in Broath is good for the Flux. Mr. J. S.

This Plant grows also in *Malabar*, where they use the Root boyl'd in Whey, as a Remedy against the *Piles*, and the Powder of it cures the Belly-ach, *Hort. Malab.*

Xanthium Malabaricum capitulis lanuginofis Muf. Petiv. 99. Betæ folio Malabarica femine Lappaceo Com. not. in H. Mal. Wellia Codiveli H. Mal. V. 10. Tab. 59. P. 117. From whence, and my own Specimens, I shall here

here give you a fhort Description of it. It's Stalks are fomewhat woody and hoary (especially towards the top) the Leaves grow (by Pairs) on short Footstalks, the young ones are Velvetty underneath, the others in shape and hoariness not unlike Pulmonaria maculosa, or Spotted Lungwort, but feldom fo large. The Flowers grow close together in a Spike, and are composed of Five Greenish Leaves fill'd with a Scarlet Thrummy Tuft. After that, towards the ripening of the Seed, The Burs in which they are included grow more spars'd, for at greater diftance; they are covered with a woolly Substance, out of which proceed small hamated or crooked Prickles, very like our English Burdock (but Four times less) and flick like them to whatever they touch. In each of these is one small, longish, flat, vetch-Bike, blackish, shining Seed. It grows in any Soil. My ingenious Friend, Mr. Sam. Brown, hath alfo fent it ame from Fort St. George, where I find there are many Plants, the fame with those in Guiney.

37. Tetruma, Pounded to Powder and applied to a

37. Tetruma, Pounded to Powder and applied to a Whitlow, breaks it. Mr. J. S. Laurustini facie Arbor Guineensis, nob. The Leaves are oval, stiff and opak, One Inch and broad, and 2 $\frac{1}{4}$ long, set alternately on all sides of the Stalk, on very short Pedicles, at and near the Top, from The Bosom of the Leaves, come forth Clusters of small Flowers, after the same manner with the Laurustinus or Wild Bay. But what these produce I cannot as yet inform you.

38. Tuffo, is very good for fore Eyes, boyl'd in Water, and the Eyes washt with the Decoction thereof. Mr. 7. S.

Flos Solis Guineensis fol. scabro, flore minore, nob. 39. Unguin, Boyl'd and drunk, is good for the Pain in the Back. Mr. J. S.

Iiiii

The

The Leaves grow alternately on Eootstalks near an Inch long, they have the exact Shape and Face of the Common Bay, but neither its Smell or Taste.

(686)

40. Unnena, Boyl'd, and the Legs washt in the Water, abateth their Swelling. Mr. J.S.

Lychnis Guineensis fructu Caryophylloide, foliis hirsutis Rorismarini angustioribus, nob.

This Plant being altogether new, I defign its Defeription and Figure amongst some other curious things I intend to present you withal, relating to Africa. It being my great Ambition to approve my felf, as in reality I am

WORTHY SIR,

From the White Crofs in Alderfgate-Street London, Sept. 22. 1697. Tour most Obliged

and very humble Servant,

James Petiver.
